Response to Amendment

1. Based on applicant's amendment, filed 5/28/2009, see page 10 through 11 of the remarks, with respect to amended claims 1, 20, 25-26, 28 and 30, have been fully considered and are persuasive, upon further consideration the 35 USC 101 rejection and prior art as applicants point out in the previous remark, are hereby withdrawn.

The claims 1-34 are allowed.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance.

This invention relates generally, to the art of watermarking digital video, and more particularly, to selecting which chrominance portion should be watermarked.

Based on applicant's amendment, with respect to claim 1 representative of claims 17, 20-22, 24-25 and 33-34 the closest prior art of record (Reed,996 and Reed,487), (Reed 996) reference is directed to selective color masking of images. One aspect of the invention is a method for mapping a change in an image attribute such as luminance or chrominance to a change in color components such that the change is less visible. (Reed 487), reference is directed to first watermark is applied in the same manner as described above relative to the first embodiment. That is, the change needed to embed the first watermark is calculated by in effect scaling by an appropriate amount a vector between black and the color being changed. But neither (Reed 996) nor (Reed 487), teach or suggest, among other things, "automatically selecting a chrominance portion, of a pixel of an image of a video signal to be watermarked, said video signal to be watermarked without changing its luminance, said, selecting step employing a perception-based table that is independent of said image and indicates for each of at least a

plurality of possible pixels in a color space which, if any, of the chrominance portions of said plurality of pixels in said color space should be selected for watermarking, said table being stored in a computer readable medium.

Additionally claim 26 representative of claims 27-32, the closest prior art of record (Reed,996 and Reed,487) do not teach or suggest, among other things, "automatically selecting at most one chrominance portion of a pixel of an image of a video signal to be watermarked by adding thereto additional information, said selecting step employing a perception-based table that is independent of (i) said image and (ii) said additional information, said table indicating for each of at least a plurality of possible pixels in a color space which one, if any, of the chrominance portions of said plurality of pixels in said color space should be selected to have said additional information added thereto, said table being stored in a computer readable medium".

These key features in combination with the other features of the claimed invention are neither taught nor suggested by (Reed, 996 and Reed, 487) prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
